

# WIRETRACE

EXECUTIVE BRIEF

## Passive Network Intelligence That Reduces Risk

WireTrace gives security leaders a continuously updated view of every device, protocol, and communication on their network - IT, OT, medical, and IoT - without agents, active scanning, or cloud dependency. The platform identifies what traditional tools miss: unmanaged assets, unsafe configurations, expired certificates, and unauthorized industrial commands. Deployed in minutes, operating passively, delivering evidence from day one.

<b>250+</b> Protocol Parsers	<b>100%</b> Passive	<b>30s</b> Time to First Asset	<b>0</b> Agents Required
---------------------------------	------------------------	-----------------------------------	-----------------------------

### Business Outcomes

<b>Complete Asset Visibility</b>	Every connected device discovered and classified - including legacy systems, shadow IT, unmanaged OT controllers, and medical devices that agents cannot reach. One inventory across all environments.
<b>Reduced Attack Surface</b>	Cleartext credentials, expired certificates, exposed management interfaces, and unprotected industrial protocols identified from observed traffic. Prioritized by real exposure.
<b>Faster Incident Investigation</b>	Protocol-level forensic evidence available immediately. Know which commands were sent to a PLC, which certificates were negotiated, and which devices communicated.
<b>Audit-Ready Compliance Evidence</b>	IEC 62443, ISO 27001, HIPAA, NCA ECC, NCA OTCC evidence generated continuously from live traffic. Reduce audit preparation from weeks to hours.
<b>Operational Safety</b>	Zero risk of disrupting production systems, medical devices, or safety-critical operations. Entirely passive - no packets sent, no agents installed.
<b>Predictable Cost of Ownership</b>	Per-asset subscription with all capabilities included. No module add-ons, no feature fragmentation. Continuous updates throughout the subscription period.

### What Sets WIRETRACE Apart

- Wire-level protocol intelligence - reads actual commands and field values, not just port numbers
- Unified IT/OT/IoMT/IoT - one platform replaces multiple domain-specific tools
- Evidence-based compliance - audit evidence from observed traffic, not manual assessments
- Air-gap deployable - fully on-premises, no data leaves the network
- Exposure-aware prioritization - vulnerabilities ranked by what is actually running
- Deployed in minutes - self-extracting installer, assets classified within 30 seconds
